Using Your Car Kit

The User Interface Module (UIM) enables you to set up and use your T605 Bluetooth Handsfree Car Kit. The UIM provides both buttons to perform operations, and an indicator light for status as shown below.

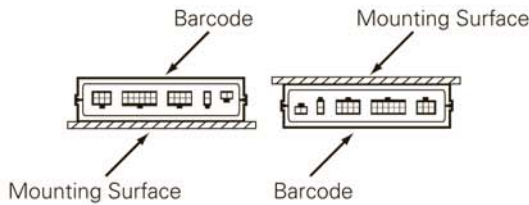

Your T605 car kit has two operating modes: **Connected mode** and **Music mode**. Mode selection is automatic.

Operating Mode	Description
Music Mode	<ul style="list-style-type: none"> Used for listening to music Indicator light is colored yellow Connection to vehicle entertainment system is enabled Music player operations can be performed from UIM or music player

Operating Mode	Description
Connected Mode	<ul style="list-style-type: none"> Used for making and receiving calls Indicator light is colored blue External speaker (if connected) is enabled Received call pauses music while the call is active. When call is ended, music is resumed

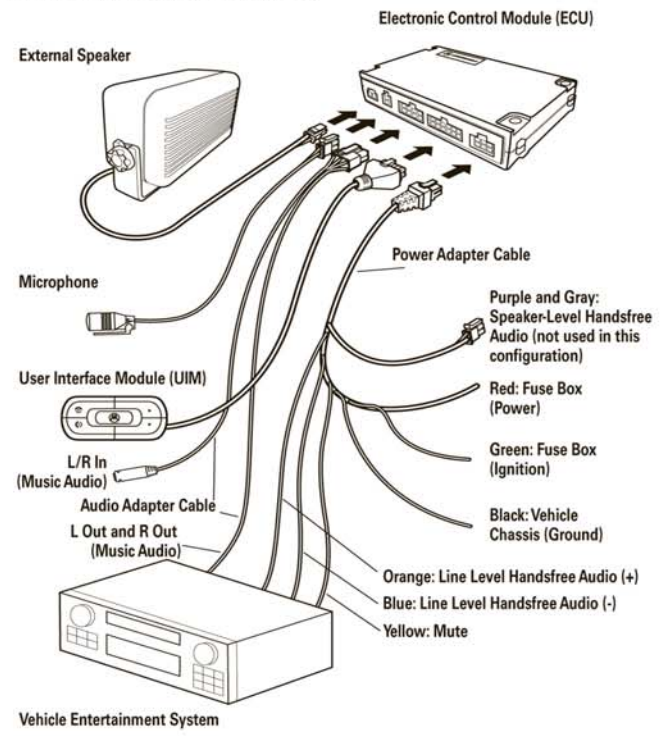

Installing the Electronic Control Module (ECU)

Mount the ECU securely. The best location for the ECU is under the dash. The box must be protected from dirt and moisture, have adequate space for cooling, and allow for cable connections.

For optimal Bluetooth performance, mount the ECU so that the side with the barcode faces away from the mounting surface as shown above. The ECU can be oriented in any direction. Do not place it behind or within large areas of metal.

For installation into a vehicle **without the use of a third-party adapter harness:**

Initial Pairing

Important: The process of initiating a Bluetooth connection with a device varies by device manufacturer. Please have your device's user manual available for reference if needed.

STEP ONE—Turn on your Device's Bluetooth Feature

Your device's Bluetooth feature is off by default. To use your car kit, you must first turn on the Bluetooth feature in your device.

For most Motorola phones, do the following:

- a Press **Menu>Settings>Connection>Bluetooth Link>Setup**.
- b Scroll to **Power**.
- c Select **Change**.
- d Scroll to **On**.
- e Press **Select** to turn on the Bluetooth feature. The Bluetooth feature remains on until you turn the feature off.

Note: These steps are for **most** Motorola phones. For other devices, see your device's user manual.

STEP TWO—Connecting to your Car Kit

Before using your car kit, you must first pair (link) it to your device. With the car kit and device turned on and in proximity:

1 ENSURE THAT THE CAR KIT IS IN PAIRING MODE.

Press and hold Multifunction (MFB) button for 2-6 seconds until it beeps and the indicator begins flashing in blue. The car kit is now in the pairing mode.

2 SET YOUR DEVICE TO LOOK FOR YOUR CAR KIT.

Perform a Bluetooth device discovery/search from your device. For most Motorola phones, do the following:

- a Press **Menu>Settings>Connection>Bluetooth Link>Handsfree>Look for Devices**. The phone lists the Bluetooth devices it finds.
- b Select **Motorola T605** from the list of devices.
- c Select **OK** or **Yes** to pair your car kit with your phone.
- d Enter the passkey: **0000**
- e Select **OK**.

Note: These steps are for **most** Motorola phones. For other devices, see your device's user manual.

When pairing is successful, the indicator light flashes in purple followed by steady blue (for Connected mode) or steady yellow (for Music mode).

If initial pairing is not successful, the car kit attempts to connect to devices that have already been paired. This is indicated by the indicator light flashing red and blue. When this occurs, return to step 2 to repeat the initial pairing process.

Automatic Connection

Once paired, each time you start your vehicle, your Bluetooth-enabled device and car kit are automatically connected (when your device is powered on and the device's relevant settings have not changed). The car kit first tries to connect to the last phone device used. If it is unable to connect, the car kit then tries connecting to the next device in its history list. If a phone device and a music device are both present, both are connected. If there are two phone devices available, the car kit connects to the one last used (and ignores the other phone).

When the Bluetooth connection is established, the indicator light stays lit. If you are in a call when the car kit powers up, the call is automatically transferred to the car kit once the Bluetooth link is completed.

If your device is powered off when you start your vehicle, the Bluetooth connection may not be automatically established when you turn on your device.

To manually connect to a previously paired device:

- 1 Turn on the device.
- 2 Set your device to look for the car kit.

For most Motorola phones, press **Menu>Settings>Connection>Bluetooth Link>Handsfree**, select **Motorola T605** from the list, and press **OK**.

Making and Receiving Calls

Your T605 car kit allows you to make and receive phone calls from your Bluetooth-enabled phone.

Note: Before you can use your Bluetooth-enabled phone, you must first create a paired link (see "Linking Your Car Kit and Bluetooth Enabled Device" on page 17 for details).

The following table provides details for making and receiving calls from your connected phone using your car kit:

Note: Some features are phone/network dependent.

Make a Call (Hand Dial)	Phone: On-in idle T605: On Enter phone number on phone, press Send key on phone, phone dials call.
Make a Call (Voice Dial)	Phone: On-in idle T605: On Press and hold green (SEND) button for 2-6 seconds, wait for prompt from phone, speak name, phone dials call.
Redial Last Number	Phone: On-in idle T605: On Press green (SEND) button. Note: This feature is available only in Connected mode.

Receive (Answer) a Call	Phone: On—phone rings T605: On—indicator light flashes quickly in blue Press green (SEND) button. While call is active, indicator light flashes slowly in blue. If music is playing, it is paused when on a call.
Change Call Volume	Phone: On—in call T605: On—indicator light flashes slowly in blue Press blue (UP ARROW) button to increase or blue (DOWN ARROW) button to decrease. Note: You can also adjust call volume from your phone (if supported by phone).
End a Call	Phone: On—in call T605: On—indicator light flashes slowly in blue Press red (END) button. To end a call on hold, press green (SEND) button to make call active, then press red (END) button to end call. If music was playing when call was answered, it is resumed when call is ended.
Mute/Unmute a Call	Phone: On—in call T605: On—indicator light flashes slowly in blue Press MFB button. While muted, indicator light flashes slowly in purple.
Answer Second Incoming Call	Phone: On—in call, 2nd call incoming T605: On—indicator light flashes quickly in blue until call is answered Press green (SEND) button, places first call on hold, answers incoming call. When call is on hold, indicator light flashes quickly in blue.
Reject Second Incoming Call	Phone: On—in call, 2nd call incoming T605: On—indicator light flashes quickly in blue Press red (END) button.
Switch Between Two Calls (Active and On Hold)	Phone: On—in call, 2nd call on hold T605: On—indicator light flashes slowly in blue Press green (SEND) button.
Link Two (Active and Incoming or On Hold Calls) - 3-way Conference	Phone: On—in call, 2nd call on hold T605: On—indicator light flashes slowly in blue Press and hold MFB button for 2-6 seconds.
